Summary

B.Tech Computer Science student with strong fundamentals in Data Structures & Algorithms, OOP, and DBMS, and hands-on experience in Python-based backend development using Django and PostgreSQL. Applied experience building AI-driven solutions, including LLM integration and RAG pipelines, with a strong curiosity for Generative AI and automation. Skilled in REST API design and asynchronous workflows, with a collaborative, ownership-driven approach to project delivery.

Projects

TRAVELQUEYOU | Intelligent Travel Planning Platform 🌐 GitHub | Ongoing

Tech Stack: Django • Django REST Framework • PostgreSQL • pgvector • RAG • Celery • Redis • Docker

- Built secure, modular backend services with REST APIs, JWT authentication, role-based access control, and asynchronous workflows over a relational database schema to support scalable, end-to-end trip management.
- Developed an AI-powered recommendation pipeline using retrieval-augmented generation to produce context-aware travel itineraries.
- Implemented semantic retrieval with vector search to enhance recommendation relevance and support intelligent travel planning.
- Debugged and resolved issues across API integrations and asynchronous workflows, applying systematic root-cause analysis to ensure reliability.

CIVICLENS | AI-Powered Civic Issue Monitoring System 🌐 GitHub

Tech Stack: Django • Django REST Framework • PostgreSQL • PostGIS • Redis • Celery • Docker

- Designed a relational and geospatial database schema using PostGIS to track, categorize, and manage civic issues by location, enabling location-aware querying and reporting.
- Integrated vision-based APIs to automatically classify and validate civic issue submissions from user-uploaded images.
- Designed asynchronous task pipelines with Celery and Redis, and containerized the application with Docker for reliable background processing and consistent deployment.

Skills

Programming: Python, Java, SQL, HTML, CSS

Frontend: React, Tailwind CSS

Backend Engineering: Django, Django REST Framework, FastAPI

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, SDLC, Agile/Scrum Methodology

Database: SQL, PostgreSQL, PostGIS

Developer Tools: Git, GitHub, Postman, Docker, Render, Railway

Generative AI: LLMs, Retrieval-Augmented Generation (RAG), Vector Databases (pgvector), Prompt Engineering, REST API Integration

Education

Parul University, Vadodara, India 2023 – 2027
B.Tech in Computer Science and Engineering **CGPA: 8.98**

Narayana Junior College, BIEAP 2023
Class XII (Intermediate) **95.6%**

St. Joseph's Secondary School, ICSE 2021
Class X **84.3%**

Certifications & Achievements

Adobe India Hackathon — Participant
Vadodara Hackathon 6.0 — Participant among 200+ teams

Technical Highlights

Solved 200+ algorithmic and SQL problems across coding platforms
LeetCode — 170+ Problems Profile
HackerRank — SQL Profile
